

HL-LHC AUP: Status of the US Contribution to LHC

Giorgio Apollinari – FNAL HL-LHC AUP Project Manager

21th -22th November 2019, HEPAP

US

Table of contents

Introduction

- Project Management Progress since last report to HEPAP (Dec. '16)
 - CD Approvals
 - Funding, EVMS performance, etc.
 - Schedule
- Technical Progress since last report at HEPAP
 - Magnets
 - Cold Mass and CryoAssemblies
 - RFD Cavities
- Conclusions

Goals of HL-LHC

The main objective of HiLumi LHC Design Study is to determine a hardware configuration and a set of beam parameters that will allow the LHC to reach the following targets:

A peak luminosity of $L_{peak} = 5 \times 10^{34} \text{ cm}^{-2} \text{s}^{-1}$ with levelling, allowing: An integrated luminosity of 250 fb⁻¹ per year, enabling the goal of $L_{int} = 3000 \text{ fb}^{-1}$ twelve years after the upgrade. This luminosity is more than ten times the luminosity reach of the first 10 years of the LHC lifetime.

Ultimate performance established 2015-2016: with same hardware and same beam parameters: use of engineering margins:
L_{peak ult} ≅ 7.5 10³⁴ cm⁻²s⁻¹ and Ultimate Integrated L_{int ult} ~ 4000 fb⁻¹ LHC should not be the limit, would Physics require more...

3

US Contribution to HL-LHC

- LARP established the necessary technology for the HL-LHC Focusing Magnets and Crab Cavities (WP3 & WP4)
- DOE created HL-LHC AUP Project, coordinating efforts from US Labs (FNAL, BNL, LBNL with contributions from SLAC, JLAB & ODU)

HL-LHC AUP Scope – Technical Details

Bare RFD Cavity

US HL-LHC

Dressed RFD Cavity (front wall removed to show internal components)

RF Ancillaries

HL-LHC AUP Scope as Key Performance Parameters

Parameters	Threshold Performance	Objective Performance
Inner Triplet Focusing Quadrupoles (Q1 and Q3)	a) 5 Q1-Cryoassemblies and 4 Q3- Cryoassemblies are accepted by CERN after testing at HL-LHC nominal temperature and ultimate gradient for the magnets, and functionality for the Cryoassembly. The Cryoassemblies will be assembled from Cold Masses built by HL-LHC AUP and Cryostat kits provige 9 CryoAssemblies + Parts b) Procurement of components for 1 additional Q3 Cold Mass	1 additional Q3-Cryoassembly is accepted by CERN after testing at HL-LHC nominal temperature and ultimate gradient for the magnets, and functionality for the Cryoassembly. The Cryoassembly will be assembled from Cold Masses built by HL-LHC AUP and Cryostat kits provided by CERN
SRF Crab Cavities	a) 8 Radio Frequency Dipoles (RFDs) Dressed cavities for the HL- LHC Crab Cavity System are accepted by CERN after being tested at HL-LHC nominal temperature, nominal frequency, and ultimate cavity voltage. Dressed cavities include HOM couplers, pick-ups, He Vessel and magnetic shields & Cavities + Parts b) Procurement of components for 2 additional RFD Dressed Cavities	2 additional Radio Frequency Dipoles (RFDs) Dressed cavities for the HL-LHC Crab Cavity System are accepted by CERN after being tested at HL-LHC nominal temperature, nominal frequency, and ultimate cavity voltage. Dressed cavities include HOM couplers, pick- ups, He Vessel and magnetic shields.

10 Q1/Q3 Cryoassemblies

10 RFD Dressed Cavities

- HL-LHC AUP Project include Objective KPPs
- The difference between Threshold and Objective KPPs represents scope contingency that provides technical, schedule, and cost margin for a successful completion of the Project.
- AUP does not contain any activity of Installation or Commissioning at the HL-LHC.

HL-LHC Scope by Performance Requirements

- Performance Requirements and Acceptance Criteria documented in appropriate documentation:
 - Approved by CERN and accepted by AUP
 - Changes (to Performance Requisitions or Acceptance Criteria) have inevitable effects on AUP.

HL-LHC AUP CD Tailoring Strategy (Schedule Driven)

- CD-0: Achieved (April 2016)
 Approved Mission Need Statement
 CD-1/3a (Oct. 2017)
 CD-1 approval for Cost and Schedule Range
 CD-3a approval for full procurement of Nb₃Sn strand
 CD-2/3b (Feb. 2019)
 - CD-2 approval of performance baseline
 - CD-2 approval for pre-series (CA1, CA2 & 2 pRFD Cavities)
 - CD-3b for construction approval of <u>fraction of coils and</u> <u>magnets parts</u>
- CD-3c & CD-3:
 - Construction approval of remaining items (all coils and magnets, cold mass and cryo-assemblies, RFD cavities)
 - DOE reviews FY20/21

Project Cost Status (Sep '19) and Funding Profile

WBS Element	Item	BCWP	BCWS	Total						
302.1	Project Management	7.3	20.9	28.2						
302.2	MQXFA Magnets Fabrication	26.0	70.4	96.4						
302.3	Crab Cavities Fabrication	2.4	13.6	16.0						
302.4	Q1/Q3 CryoAssemblies Fabrication	11.3	30.6	41.9						
	Budget At Completion (BAC)	182.4								
	DOE TPC			242.72						
	Total DOE Contingency			60.3						
	Cost of Work Performed (ACWP)			45.3						
	Work Remaining (BAC-ACWP)			137.1						
			43.98%							
Funding										
				Totol						

Cost Performance Trends

Monthly Risk Management & Change Control Boards:

- Ex: 39 BCRs processed, with 13 positive impact and 26 negative impacts
- Used ~3.1 M\$ Contingency since baseline

HL-LHC AUP - Q1/Q3 Cryo-Assemblies Integrated Schedule

HL-LHC AUP - RFD Dressed Crab Cavities Integrated Schedule

HL-LHC AUP Crab Cavities Assembly Schedule Chart

Delivery Dates – CryoAssemblies & Cavities

- Funding Agency endorsed AUP to agree with CERN on Delivery Dates with ~11 months of schedule float (called "US Project Schedule")
 - Agreement achieved on Feb. 2018 and Jul. 2019
- AUP developed RLS to complete deliverables ~11 months ahead of agreed dates (called "HL Project Schedule")
 - These "HL Project Schedule" AUP dates contain production yield assumptions based on LARP experience
- At this time, CERN has decided to:
 - Build Master HL Schedule using the "HL Project Schedule"
 - Install in LHC tunnel Deliverables #3 to #8

Nov. '19 Cost & Schedule Review at CERN

- Review on status of HL-LHC, report to CERN DG.
 - Chair: N. Holtkamp
- HL-LHC declared no need to postpone start of LS3 (Jan. '24)
- HL-LHC declared AUP on the critical path
 - Notification arrived 1 week before review !

- (Recall of) Review Committee Assessment relevant to AUP:
 - Schedule risk for the Q2 (CERN) is significant compared to Q1/Q3 (AUP) that has imbedded float.
 - Requirement to reach ultimate performance is not uniformly applied to all upgrade systems and adds to technical and schedule risk.
 - It is unlikely that LS3 can be executed within 2.5 years without taking a more aggressive approach
 - CERN master schedule needs to make explicit float of in-kind contributions visible.
 HL-LHC AUP Status – HEPAP – Nov. 2019

Table of contents

Introduction

- Project Management Progress since last report to HEPAP
 - ✓ CD Approvals
 - ✓ Funding, EVMS Performance, etc.
 - ✓ Schedule
- Technical Progress since last report at HEPAP
 - Magnets
 - Cold Mass and CryoAssemblies
 - RFD Cavities
- Conclusions

Technical Status: progress since Dec '16

- Short Models (S) and Prototypes (P)
 - MQXFS1
 LARP/CERN Built/
 - MQXFAP1
 - MQXFAP2
 - MQXFAP1b

RFD-LARP#1 & #2

- LARP/CERN Built/Tested
- LARP-Built/Tested
- LARP-Built/ AUP Tested
- P06(AUP) + Reuse 3 coils from AP1 LARP Built
- In a sentence: good success on short model Magnets, piecemeal successes with no overall winner on Prototype Magnets, good results on Cavities
 - Coils of the appropriate dimensions can be built
 - CLIQ and QH protected MQXFA magnets in 87(-1) quenches
 - Present HiPot of Coils/Magnets provide appropriate QC
 - Achieved Nominal on 2 Magnets
 - Several coils got to few ~100A from Ultimate
 - Magnetic Field Quality acceptable
- <u>Due to CERN schedule requirements, magnet pre-series</u> deliverables production has started in ~Dec'18.

Status: Conductor Procurement & QC

- Strand Procurement and QC:
 - 50% strand received
 - 1 contract remaining to be placed in FY20
 - Conductor is being delivered timely
 - No significant issues on performance
 - Helium cap by BOST's helium supplier; Fermilab is providing He gas and getting credit back

302.2 Magnets Update: *L2-G. Ambrosio* ~100 Cables, ~90 Coils, ~23 Assemblies of Magnets

- Strand and Cable Fabrication
 - 28 Manufactured
 - 27 Accepted
- Coils at FNAL and BNL
 - 23 (being) Manufactured
 - 11 Accepted, 5 in progress
 - 3 quarantined, 4 rejected
- Magnets
 - MQXFA03 at BNL for vertical test.
 - First deliverable Magnet
 - MQXFA04 Coil selection now, ready by early 2020

302.4 Cold Mass and Cryostat Update ~20 Cryostats

BNL CRYOGENICS UPGRADES

Linde 1610 Liquefier 80-100 L/hr

Linde 1430 is in house, not yet plumbed in. Linde 1610 at BNL still under refurbishment.

L2-S. Feher

• Plan B being prepared

TEST STAND 4 @ FERMILAB

Lot of progress in every front

- Lambda plug has been fabricated and being tested
- Adapter box fabrication
- Cryogenic infrastructure upgrade
- QP modules completed waiting for system tests
- MM probe driving module successfully tested

Zero magnet test milestone is in March 2020

302.3 RFD Crab Cavities Status L2-L. Ristori AUP: 2 Proto+2 pre-series+10 Cavities

Fabrication Status: Manufacturing Results Summary

US HL-LHC

Rotational BCP + HPR Validation

M. Kelly (ANL) – D. Bice (FNAL)

RFD-LARP-001 has been
successfully tested at FNAL,
after undergoing full
processing at APS-TD and
ANL facilities: processing
and facilities validation is
complete

Rotational BCP tool for RFD cavity (ANL/FNAL facility)

- New rotational Bulk & Light
 BCP
- 600 C degassing
- HPR and clean assembly
- 120 C bake
- VTS test

RFD HPR and Cleanroom Assembly (ANL/FNAL facility)

Heat Treatments + Cleanroom Assy Validation

P. Berrutti (FNAL)

600'C Heat Treatment (FNAL)

120'C Bake (FNAL)

VTS preparation (FNAL)

RFD-LARP-001 exceeded requirements for HL-LHC

HL-LHC AUP Status – HEPAP – Nov. 2019

Conclusions

- HL-LHC AUP Project has received CD-2 (baseline) and CD-3a/CD-3b (Nb₃Sn & Magnets 1-to-7) approval by DOE
- Technical Challenges
 - Demonstrate performance of first deliverables (MQXFA03 & MQXFA04) or Prototypes (RFD Cavities)
- Next hurdle: IPR Review in Jan. '20 and CD-3c for full magnet/bare cavities production by ~end 2020.
- Delivery dates to CERN agreed upon and integrated in HL-LHC Master Schedule.
