

Nathalie A. Wall is a Tenured Professor in the Nuclear Engineering Program of the University of Florida. Her research focuses on the environmental behavior of radionuclides for applications to the nuclear fuel cycle and nuclear forensics. She is best known for her work on the thermodynamic properties of actinides and fission products. Wall is a Fellow of the American Association for the Advancement of Science. She is active under the ACS as the 2022 Chair of the Nuclear Chemistry Division. Wall is a native of France; she earned an undergraduate degree in Physical Sciences and a doctorate in radiochemistry at the University of Paris; she was a postdoctoral research associate at the Florida State University. N.A. Wall worked in the Department of Nuclear Waste Management at the Commissariat à l’Energie Atomique (CEA, the French Alternative Energies and Atomic Energy Commission) and as a staff scientist at Sandia National Laboratories. She was a faculty member of the Chemistry Department at Washington State University, prior to moving to the University of Florida Department of Materials Science and Engineering in 2019.
