

CEBAF Renovation and Expansion (CRE) Project

Project Overview:

The U.S. Department of Energy (DOE) Office of Science has approved Critical Decision Zero (CD-0), *Approval of Mission Need*, for the CRE Project at the Thomas Jefferson National Accelerator Facility (TJNAF). The Mission Need Statement described the need to advance a strategic campus plan, designed to deliver more attractive, mission-focused, and functional workspaces. The CRE Project will consolidate the TJNAF workforce that is currently scattered in several lease spaces and provide more effective and efficient operations. The project will modernize and expand the CEBAF Center Building, modernize the ARC Building after conveyance to DOE, discontinue costly leases, improve energy efficiency in existing buildings, and better address functional workspace needs for TJNAF staff and users.

Currently the cost range for the project is \$65M to \$90M. Critical Decision One (CD-1), *Approve Alternative Selection and Cost Range*, is expected in August, 2019.

Conceptual Rendition of New North Entrance to CEBAF Center:
