For Immediate Release:

St. Louis Students Win National Science Bowl[®] Regional Competition, Secure Spot in National Finals

WASHINGTON, D.C. — A team of High School students from St. Louis, Missouri won their regional competition for the 2022 National Science Bowl[®] (NSB) this past weekend and will compete in the NSB National Finals this spring, the **U.S. Department of Energy** (DOE), who sponsors the NSB, announced today.

"The National Science Bowl[®] is a great opportunity for young people across America to come together through science," said U.S. Department of Energy Deputy Secretary David Turk, "and I want to congratulate the Ladue Horton Watkins High School team on advancing to the National Finals! Good luck to you – our future scientists, innovators, and leaders!"

The NSB brings together thousands of middle and high school students from across the country to compete in a fast-paced question-and-answer format where they solve technical problems and answer questions on a range of science disciplines including biology, chemistry, Earth and space sciences, physics, and math.

The team from your area that won their qualifying regional competition this past weekend and will be advancing to the National Finals is:

Ladue Horton Watkins High School, St. Louis, Missouri

The winning teams from each of the middle and high school regional competitions will move on to compete in the NSB Virtual National Finals, where the top eight middle school and top eight high school teams will be determined.

For all middle school regional winners, the Virtual National Finals will take place on Saturday, May 7, 2022. For all high school regional winners, the Virtual National Finals will take place on Saturday, May 21, 2022.

The top eight middle school and the top eight high school teams will compete in-person at the NSB Championship Tournament to be held in Washington, DC, from Friday, July 8, - Tuesday, July 12, 2022. Media are invited and encouraged to

attend the in-person championship. For press inquiries, please contact the media outreach manager, Nathan Clark at <u>nathan.clark@science.doe.gov</u>.

Teams will receive at least \$500 and up to \$3,000 for first place, to use for their school's STEM activities. But to many, the ultimate prize is simply the prestige of winning the National Championship.

Today, the NSB annually draws more than 14,700 middle- and high-school competitors. Since the first competition in 1991, approximately 325,000 students have faced off in the National Science Bowl® Finals. The knowledge that <u>former competitors</u> have acquired and, more importantly, the collaborative skills and study habits that they learned along the way have led them to successes in a variety of fields. Many have become researchers; others are science and math professors.

The 2022 competitors will follow in the footsteps of previous National Science Bowl® contestants and will blaze a trail for students in science, math, and engineering.

Middle and high school student teams come from across the country: large and small schools, urban and rural settings. Each team is composed of four students, one alternate, and a teacher who serves as an advisor and coach. The competition tests the students on a range of science disciplines including biology, chemistry, Earth science, physics, energy, and math. The Department of Energy Office of Science manages the National Science Bowl® and sponsors the finals competition.

DOE's Office of Science is the single largest supporter of basic research in the physical sciences in the United States and is working to address some of the most pressing challenges of our time. For more information, please visit <u>https://www.energy.gov/science</u>.
